INSPECTION OF COMMERCIAL FERTILIZERS

MADE FOR THE STATE DEPARTMENT OF AGRICULTURE

The inspection of commercial fertilizers reported in this bulletin was made under the direction of the Honorable Andrew L. Felker, Commissioner of Agriculture. The state inspector, Mr. Eugene D. Sanborn, collected samples of 127 brands of fertilizer materials which were offered for sale by dealers or had been delivered to consumers during the year ending June, 1931. The general character of the fertilizer materials collected is shown by the following classification:

Complete fertilizer	103
Nitrogen and superphosphate	1
Superphosphate (acid phosphate)	6
Nitrate of Soda	1
Calcium nitrate	1
Sulphate of ammonia	2
Ground bone	5
Tankage	2
Natural manures	6

127

THE FERTILIZER LAW

The New Hampshire fertilizer law applies to all fertilizer materials offered for sale, whether mixed materials in the form of complete fertilizers or unmixed materials as superphosphate (acid phosphate), nitrate of soda, ground bone, tankage, etc. Under the provisions of the law every manu-

facturer or dealer who shall sell or offer for sale any fertilizer material shall furnish with each lot or package a clearly printed statement certifying the brand name under which it is sold, the name and address of the manufacturer, the number of net pounds the package contains and a chemical analysis stating the minimum percentages of nitrogen, of total phosphoric acid, of available phosphoric acid and of water soluble potash. No person shall sell or offer for sale any pulverized leather, hair or wool waste, peat, garbage tankage, or any inert material whatsoever, without an explicit printed statement of the fact conspicuously fixed to every package of such material. The state official in charge of the administration of the fertilizer law is the Commissioner of Agriculture.

During the past year five conferences have been held by officials charged with the enforcement of the fertilizer laws, agronomists and manufacturers. They have agreed to cooperate in the territory represented by the six New England States, New York, New Jersey, Pennsylvania, Delaware, Maryland, and West Virginia in enforcing the following changes:

1. When fertilizers are registered with the state fertilizer control official the guaranty shall be stated in terms of **nitrogen** and not in terms of **ammonia**.
2. Grades or analyses of mixed fertilizers shall be expressed in whole units and **not** in fractions or decimals.
3. Trade or brand names shall include the numerals giving the minimum percentage of each plant food in the order—nitrogen, available phosphoric acid, and potash.

In Table I are given the grades of complete fertilizers collected, the number of brands found in each grade, the average analysis of each grade and the average retail price per ton.

TABLE I

Formula	Number of brands	Average per cent nitrogen	Average per cent total phosphoric acid	Average per cent available phosphoric acid	Average per cent water soluble potash	Average retail price per ton

CONFORMITY TO GUARANTEE

Forty-seven of the 127 brands analyzed were found to contain less than the guarantee of one or more of the three constituents. The total number of guarantees on the 127 brands was 462, the total number of deficiencies 54, the

per cent of the guarantees deficient 11.7. In the last year's inspection this figure was 13.0 per cent. The previous year it was 12.3 per cent. Many of the deficiencies were comparatively negligible, the small deficiency in one constituent being offset in value by overrun in other constituents.

A detailed summary of the deficiencies in the 47 brands which failed to meet the guarantees follows:

	Number of Brands	Total Deficiencies
Nitrogen, total phosphoric acid, available phosphoric acid and potash	1	4
Nitrogen, total phosphoric acid and potash	0	0
Nitrogen, available phosphoric acid and potash	0	0
Nitrogen, total phosphoric acid and available phosphoric acid	0	0
Nitrogen and total phosphoric acid.....	0	0
Nitrogen and available phosphoric acid....	0	0
Nitrogen and potash	4	8
Nitrogen	15	15
Total phosphoric acid, available phosphoric acid and potash	0	0
Total phosphoric acid and potash	0	0
Available phosphoric acid and potash.....	0	0
Potash	20	20
Total phosphoric acid and available phosphoric acid	0	0
Total phosphoric acid	1	1
Available phosphoric acid	6	6
	<hr/> 47	<hr/> 54

NITROGEN DEFICIENCIES

One hundred twenty-one brands were guaranteed to contain nitrogen in amounts varying from 0.82 per cent

to 20.56 per cent. Twenty brands failed to meet the guarantee. Fourteen of these brands were deficient one-fourth per cent or less, the equivalent of 5 lbs. or less of nitrogen per ton. The amounts of the other deficiencies expressed as pounds per ton are as follows: 5.8 lbs., 5.8 lbs., 6.0 lbs., 6.0 lbs., 7.4 lbs., 24.2 lbs. The greatest deficiency, 24.2 lbs., is equivalent to approximately \$2.50 per ton, assuming the nitrogen present in the inorganic form.

PHOSPHORIC ACID DEFICIENCIES

One hundred five brands were guaranteed to contain phosphoric acid. Eight brands failed to meet the guarantees. One was deficient in total phosphoric acid, six in available phosphoric acid and one in both total and available phosphoric acid. Only one of these deficiencies would amount to as much as \$1.00 per ton.

POTASH DEFICIENCIES

One hundred nine samples were guaranteed to contain potash. Twenty-five failed to meet the guarantee. Only two of these deficiencies, however, would amount to as much as \$1.00 per ton.

In the tabulation of the analyses in the following pages deficiencies of two-tenths of one per cent or more are shown in italics. The names of the manufacturers are arranged alphabetically, and under the manufacturer the different brands are arranged alphabetically or numerically by formula.
